

7th graders going into Algebra

Summer HW Instructions

*** Do not be alarmed at how many pages. Many pages are strictly 'notes' and example problems for your reference. All (or nearly all) the pages have notes filled in that show you how to solve the problems. Then there are problems already completed to exemplify how to solve.

On each page there are "empty/blank" problems for you to solve (this is what you complete). Be sure to go through every page of the entire packet and solve the problems.

Looking forward to seeing you in August!

Rate of Change	A ratio that shows how one variable changes with respect to another. On a linear graph, this is called the <u>slope</u> of the line!			
Slope 	- Slope is written as a <u>ratio</u> of the vertical change (rise) to the horizontal change (run) between any two points on a line. - This remains <u>constant</u> for any two points on the same line. - Slope is written as a <u>fraction</u> in <u>simplest form</u> (reduced) - Variable for slope: <u>m</u>

Slope Formula	Used to find the slope between any two points (x_1, y_1) and (x_2, y_2)	
	Formula: $m = \frac{y_2 - y_1}{x_2 - x_1}$	
	Always remember to simplify your answer!	
Examples	Directions: Find the slope of the line between each pair of points.	
	1. $(-13, 8)$ and $(3, 12)$ $m = \frac{12-8}{3-(-13)} = \frac{4}{16} = \frac{1}{4}$	2. $(19, -12)$ and $(5, 16)$ $m = \frac{16-(-12)}{5-19} = \frac{28}{-14} = -2$
	3. $(-15, 9)$ and $(-10, 3)$ $m = \frac{3-9}{-10-(-15)} = \frac{-6}{5}$	4. $(-1, 8)$ and $(8, -4)$ $m = \frac{-4-8}{8-(-1)} = \frac{-12}{9} = -\frac{4}{3}$
	5. $(7, 3)$ and $(6, -2)$ $m = \frac{-2-3}{6-7} = \frac{-5}{-1} = 5$	6. $(12, 7)$ and $(5, 9)$ $m = \frac{9-7}{5-12} = \frac{2}{-7} = -\frac{2}{7}$
